

RBL0064

ABSTRACT OF THE DISCLOSURE

Use of objects such as programs, data, and the like, in mobile stations assist in the use of a value added services node. The objects are loaded in the mobile equipment/terminal or the subscriber identity module of the mobile terminal and are controlled, modified or executed via a wireless interface. The objects assist the operation between mobile station user and the value added services node in that the menu for utilizing the respective value added service is displayed fully or in part on the display of the mobile station part depending on the actual position in the menu.
